Lecture 36
                   Chapter 9 Estimetion problems
                 · population parameter > Point estimation > Interval estimation
Another way is to approximate using Maximum likelihood estimation
       · Bino mid process pistue parameter associated
                    you perform (og) trials & you get a sample
                                DNDDN - - - - DV
                                              on the basis of this sample you will try to find p.
       • Suppose my binomial experiment 3 trials

• suppose my binomial experiment 3 trials

• ruid \triangleright (he want to tind out p)
        When I actually performed the experiment, suppose I get
                         propability of getting this outcome - (p. p (1-p) like lihood function
                                                                              maximiz at
                                                    L(\beta) = p^2(1-\beta)
                                                     L'(p) = 0 \Rightarrow p = 0 or p = 2/3 Aug.
  Formally MLE ( mare income like lihood esti nation)
          Given independent observation x, x2 - . Xn from a pdf/pmf
   L(x_1, x_2, \dots, x_n, \theta) = f(x_1, \theta) + f(x_2, \theta) - \dots + f(x_n, \theta)
           Likelihood function in function by hairy L' (0) = 0, that gives you an estimation for O.
  Out Consider samples (x) x2 -. xn from a normal distribution
               N(N, o). Find the maximum likelihood estimators of M& o.
                                      pdt = \frac{1}{\sqrt{2\pi}} e^{-\frac{1}{2} \left( \frac{x-M}{\sigma} \right)^2}
  Soly Likelihood furtion
             L(x, x, \dots, x_n, \mu, \sigma^2) = \frac{1}{\sqrt{2\pi}\sigma} e^{-\frac{1}{2}\left(\frac{x_1 - \mu}{\sigma}\right)^2} \frac{1}{\sqrt{2\pi}\sigma} e^{-\frac{1}{2}\left(\frac{x_2 - \mu}{\sigma}\right)^2} \frac{1}{\sqrt{2\pi}\sigma} e^{-\frac{1}{2}\left(\frac{x_2 - \mu}{\sigma}\right)^2}
                                          L : \prod_{i=1}^{l} \frac{1}{\sqrt{2\pi}} \exp\left(-\frac{1}{2} \left(\frac{x_i - R}{\sigma}\right)^2\right)
                                           L = \frac{1}{(3\pi)^{3/2}} \sigma^{n} \exp\left(-\frac{1}{2} \sum_{i=1}^{n} \left(\frac{n_{i}-\mu}{\sigma}\right)^{2}\right)
                                         lu[= (1 log -2)
```

Our Suppose to rete are used in a biomedical study where they are injected with cancer cells and then given a cancer drug that is designed to increase their survival rate. The survival times, in months, are 14,17, 27, 18, 12, 8, 22, 13, 19 & 12. Assume that the emponential distribution applies. Give a maximum likelihood estimate of the mean survival rate

SON exponential distribution
$$f(x, \beta) = \int_{\beta} \frac{1}{\beta} e^{-x/\beta}$$
 $\pi > 0$ $\beta \rightarrow m = m \text{ value}$.

$$L(\beta) = \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_1}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_2}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix}$$

$$L(\beta) = \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_2}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_2}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \end{pmatrix} \cdot \begin{pmatrix} \frac{1}{\beta} e^{-\frac{x_{10}}{\beta}} \\ \frac{1}{\beta} e^{-\frac{x_{10}}{$$

It is known that a sample consisting of values 12, 11.2, 13.5, 12.3, 13.8, & 11.9 comes from a population with pag where 070.

 $f(x,\theta) = \begin{cases} \frac{\theta}{x^{\theta+1}} & x > 1 \\ 0 & \text{otherw is a} \end{cases}$

$f(x,\theta) = \begin{cases} \frac{\theta}{x^{\theta+1}} & x > 1 \\ 0 & \text{otherw is.} \end{cases}$ where $\theta > 0$.
Find the MLE of O.
